

System Enhancer LP User Guide

The Luminist System Enhancer LP features expanded and intensified algorithms, and a de-magnetizing section. The improvements for the Luminist System Enhancer LP work hand-in-hand with the shielding technologies used in our Luminist cables. The System Enhancer will completely condition all components (speakers, cables, and electronics) in the sound system, by removing molecular stresses and residual magnetism while "opening" the system to perform at its full potential. The tones and signals generated by the Luminist System Enhancer LP are presented in the optimal frequencies and amplitudes to perform the enhancement process completely, in the shortest possible time.

The System Enhancer LP is very Easy to use. You will hear striking improvements in the sonic characteristics of your system presenting an enhanced "air" and transparency. A more accurate, stronger, and sophisticated reproduction of overtones, harmonics, and dynamics will appear. The System Enhancer LP will help provide an extraordinary musical experience!

Use

1. The System Enhancer LP is two-sided, you'll need to play both sides.
2. Play the System Enhancer LP on your turntable as you would any other record.
3. Keep your system's volume at a moderate level.

Cleaning

Clean the System Enhancer LP with a record brush or a record cleaner.
