

System Enhancer CD User Guide

The Luminist System Enhancer completely conditions all components (speakers, cables, and electronics) in the sound system by removing molecular stresses and residual magnetism while "opening" the system to perform to its full potential. The tones and signals generated by the Luminist System Enhancer are presented in the optimal frequencies and amplitudes to perform the enhancement process completely in the shortest possible time.

The System Enhancer is very Easy to use. You will hear striking improvements in the sonic characteristics of your system presenting an enhanced "air" and transparency. A more accurate, stronger, and sophisticated reproduction of overtones, harmonics, and dynamics will appear. Simply put, the Luminist System Enhancer will help provide an extraordinary enrichment of your musical experience!

Use

1. Insert the Luminist System Enhancer into your CD player or transport as you would a normal music CD.
2. Set the playback sound level to a moderate volume.
3. Set the CD player to repeat play mode for four (4) complete cycles. This can be at moderate or reduced volume level.
4. Once a month, repeat one (1) cycle of the Luminist System Enhancer to keep your system performing at its very best.
